

Unable to take objects alone

Unable to eat/ drink alone

Unable to dress yourself alone

Unable to read book/ play phone alone

Do you have the following problems?

01

Passive Flexion & Extension:

The rehabilitation glove will drive the affected hand to grasp the small ball/water cup and other objects. Patients could intelligently adjust the time of flexion and extension.

02

Innovative Mirror Training:

With the help of syrebo™ rehabilitation glove, the healthy hand drives the affected hand to move synchronously, activates the mirror neurons, promotes the autonomic recovery of the brain and speeds up the rehabilitation process of hand function.

03

Active Game Training:

Game training could make rehabilitation more interesting, and directly activate the center nerve, accelerate the rehabilitation of stroke patients' brain motor intention control output. It can be connected to App for operation (can be screened to TV)

Syrebo™ Soft Rehabilitation Glove is Your Best Companion!

Syrebo™ hand rehabilitation glove
